The Adjustable Pressure Switch is designed to be used to reinforce prehension goals, or it can be unobtrusively mounted on a lapboard or any other convenient surface for single finger activation.

**Operation:**
1. The Adjustable Pressure Pinch Switch does not require any batteries to operate.

2. Plug the Adjustable Pressure Pinch Switch into the jack on your switch-adapted toy/device.

3. If it is necessary for you to use an adapter, make sure that you use a MONO adapter, not a STEREO adapter.

4. Make sure that the connection between the Adjustable Pressure Pinch Switch and your toy is tight. There should be no gaps.

5. Actuate the Adjustable Pressure Pinch Switch by either (1) mounting it on a lapboard or table top and using single finger pressure for activation or (2) pinching the switch between two fingers, usually the thumb and index finger, to work on prehension skills.

6. The toy/device will only remain activated while the Adjustable Pressure Pinch Switch continues to be actuated. Once you release the switch, the toy/device will turn off. It is momentary switch operation.

7. In order to adjust the pressure required to activate the switch, a tiny Allen wrench is supplied with each unit. Please store the Allen wrench in a safe place, as experience has taught us that it is easily misplaced due to its’ size.

8. Insert the Allen wrench into the tiny hole in the center of the back of the Adjustable Pressure Pinch Switch. Turn the wrench clockwise to decrease the force or counterclockwise to increase the activation force. It is best to make these changes while the unit is connected to the device, which it is activating.

**Troubleshooting:**

**Problem:** The Adjustable Pressure Pinch Switch does not activate your toy/device.

**Action #1:** Make sure that the connection between the Adjustable Pressure Pinch Switch and your toy/device is tight. There should be no gaps. This is a common error and an easy fix.

**Action #2:** If you are using an adapter, make sure that it is a MONO adapter, not a STEREO adapter.

**Action #3:** Make sure that the switch is set to the appropriate amount of pressure for the individual who is using the switch. If not, make the appropriate adjustments.

**Action #4:** Try a different switch with your toy/device to rule out the toy/device as the source of the problem.

**Care of Unit:**
The Adjustable Pressure Pinch Switch can be wiped clean with any household multi-purpose cleaner and disinfectant. We recommend Simple Green, which is a non toxic biodegradable all-purpose cleaner.

*Do not submerge* the unit, as it will damage the electrical components.

*Do not use abrasive cleaners*, as they will scratch the surface of the unit. The switch is not waterproof. **Please do not place in a location where fluids will spill into the mechanism (drooling, etc.).**
