**Enabling Devices Introduces the Triple Play**

Hastings-On-Hudson, NY – September 18, 2006 – Enabling Devices announces that it has once again developed an innovative, yet inexpensive communicator, the **Big Talk Triple Play**.

According to Steven Kanor, Ph.D., President of Enabling Devices, “we decided to combine two of our very popular products into one in order to give our customers the most flexibility at the lowest price. Our Big Talk and Press Your Luck have now become the **Big Talk Triple Play**.”

Enabling Devices’ Engineer Peter Debany, who developed the Triple Play, says: “This communicator has four levels and three message capabilities: single message, sequential, and random. Record time is 75 seconds per level for a total of 300 seconds. We also have improved the product by allowing the user to record an unlimited number of messages within the maximum record time. In other words, you can record one 75-second message per level, or three 25-second messages, or fifteen 5-second messages, and so on.”

The sequential capability allows you to record a series of messages which is great for storytelling and creating conversations. The random function allows the user to

playback pre-recorded messages in random order. This function is great for playing games especially those that use dice, spinners or cards. A clear plastic cover is provided free of charge.

Enabling Devices is a company dedicated to developing affordable learning and assistive devices to help people of all ages with disabling conditions. The company specializes in creating custom devices for individuals with severe disabilities. Founded by Steven E. Kanor, Ph.D. and originally known as Toys for Special Children, the company has been creating innovative communicators, toys, and switches for the physically challenged for more than 30 years.
