

Customized Products

Over the forty years that Enabling Devices has been in business, dozens of individuals, therapists, teachers, and families have contacted us about challenging needs that had no existing solutions. Starting with our founder, Dr. Steven Kanor, and continuing with our product development team, we have collaborated with our customers to create unique products for particular needs. Many of those products have eventually been added to our commercial product line. Here are just a few of those products.

Eye Blink Switch (#9008) – A 7-year-old boy was paralyzed from the chin down in a car accident. Therapists at his rehab hospital contacted us about creating an eye blink switch so the boy could communicate using the switch and a scanning communicator.

Tail Light Switch, Say It Play It (#464) – A Speech Language Pathologist needed a communicator with visual and tactile features for a child who was hearing impaired. These features would give him cues that he was activating his message.

Easy Flex Dual Ultimate Switch (#8209) – An Occupational Therapist had a client who only had head movement and need switches with a light touch. In addition, his specialized wheelchair had very limited room to attach a switch. So we created one mount with two of our light touch Ultimate switches.

Tactile Symbol Communicator (#4040) – The mother of a child with visual impairment, and who was also non-verbal, contacted us. The mother had developed a series of tactile symbols and wanted to connect those symbols with an AAC device. (Symbols not included.)

High Contrast Icons (#4046) – The mother of a child with cortical blindness could not find icons with a black background for high contrast. We worked with her to develop this set.

Choice 4 Communicator (#1237) – The speech therapy department of a school district asked us to create a transitional communicator. The Choice 4 moves a student from objects to pictures to symbols.

Adjustable Angle Communicator (#806) – An occupational therapist at a private special education school needed a large vertical target for one of her students. We also added space for clamping to hold the communicator in place when it was hit.

One Message Communicator (#4595) – A national non-profit AT lending library wanted a simple, inexpensive, easy-to-use communicator to make available to families borrowing from their library.

Misting Fan (#2134) – Special Education teachers at a local school wanted a fun adapted toy to teach their students about the weather.

DO YOU HAVE A CHALLENGING NEED? CONTACT US, WE MAY BE ABLE TO HELP YOU.
